equations that will be satisfied by these classes of functions or at least some of these type of functions? For polynomials we can think of a differential equation of the type:  $(11) \text{ dny dxn (x) = 0}$  for all  $x$  in some interval, (with  $n \in \mathbb{N}$ ) whose "solutions" would obviously include any arbitrary polynomial function  $y$  of  $x$  with degree at

### Theory of Ordinary Differential Equations

Ordinary Differential Equations An ordinary differential equation (or ODE) is an equation involving derivatives of an unknown quantity with respect to a single variable More precisely, suppose  $j; n \in \mathbb{N}$ ,  $E$  is a Euclidean space, and  $F \subset \mathbb{R}^n \times \mathbb{C}^1 \times \dots \times \mathbb{C}^j$  Then an  $n$ th order ordinary differential equation is an equation
